# Week 1 - Core - Worksheet | AI Conceptual Understanding - How workflow designs affect outcomes

**Name:** _____ **Class:** _____ **Date:** _____

Follow the arrow from the outcome back through the steps to the design choice that shaped it.

## Trace it back

For each example, write which design choice shaped the outcome and what effect it had.

| Example | The design choice (step added, moved or dropped) | Effect on the outcome |
|---|---|---|
| Example A | | |
| Example B | | |
| Example C | | |

## My explanation

Pick one example. In two or three sentences, explain to a reader how its workflow design shaped the outcome.

_____

_____

_____

_____

## Input or design?

An outcome came out weak but the input was clear. Explain why the workflow design is the more likely cause.

| |
|---|
| |

## Exit ticket

Exit ticket - Explain, in one clear sentence, how the workflow design affected the outcome of one example you studied today, and give your reason.

_____

_____

**Challenge (stretch)**

Challenge - Apply the skill to a more complex case and justify the approach: take a workflow with three or four steps and one weak outcome, decide where a check or evaluation step should be added, and justify why that placement would improve the outcome. This stretches toward the Proficient outcome of explaining how a workflow design can be adjusted to improve a model's performance.
