# Week 1 - Lab - Worksheet | AI Conceptual Understanding - How workflow designs affect outcomes (Lab)

**Name:** _____ **Class:** _____ **Date:** _____

Same input, same model, one changed design - map it to prove where the difference comes from.

## Fair-test map

For each pair, record the one design choice that changed and its effect on the outcome.

| Workflow pair | Design choice (what changed) | Effect on the outcome |
|---|---|---|
| Pair 1 | | |
| Pair 2 | | |
| Pair 3 | | |

## My conclusion

Use your maps as evidence. Which workflow design produced the better outcome, and why?

_____

_____

_____

## Was it fair?

Explain how you know the difference came from the design choice and not from the input.

| |
|---|
| |

## Tool log - Teachable Machine / Scratch (workflow designs affect outcomes)

Record as you work. Goal: A two-design comparison explaining how design affects outcomes.

| Step | What I did | What I saw / result |
|---|---|---|
| 1 | Run design A on a small test-set and score it. | |

| | | |
|---|---|---|
| 2 | Run design B on the same test-set and score it. | |
| 3 | Compare the two scores and describe how the design changed | |
| 4 | Name the single design choice that mattered most. | |
| 5 | Write the rule: a better design gives a better outcome. | |

**Design A vs B**

| Test case | A output | B output | Which better? |
|---|---|---|---|
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |

**Safety check (tick): I used no personal data (no faces, voices or names).** ☐

## Exit ticket

Exit ticket - Name which design gave the better outcome in one pair, justify it with your mapped evidence, and say why the input cannot be the cause.

_____

_____

**Challenge (stretch)**

Challenge - Apply the skill to a more complex case and justify the approach: design your own fair test for a workflow with several steps, choose one design choice to change (for example, moving the check step earlier), predict how the outcome should improve, and describe how you would map and compare the before and after to prove it. This stretches toward the Proficient outcome of evaluating how design choices shape a model's performance.

_____

_____
