Week 2 - Lab - Worksheet | AI Solution Design & Development - Refines workflows by improving structure, sequencing and tool selection (Lab)

Name: _____ **Class:** _____ **Date:** _____

Design A checks twice and can disagree; design B verifies once, before the branch.

Judge the designs

Compare designs A and B. Log three weaknesses and tick the lever each belongs to.

Weakness (which design)	Lever (structure / sequencing / tool)

My improved design

Describe your improved workflow: name the shared stage, the branch point, and the tool on each branch.

_____

_____

_____

Justify it

Pick one choice - structure, order or tool - and explain how it makes an output reliable and fit for its audience.

Tool log - Scratch (refine a workflow's structure and sequencing)

Record as you work. Goal: A refined Scratch workflow and an explanation of the improvement.

Step	What I did	What I saw / result

1	Run the starter project and note what is clumsy or fails.	
2	Reorder or regroup the steps to improve the structure.	
3	Add one check step and choose the better-suited block/tool	
4	Re-run and confirm the output improved.	
5	Explain which refinement helped most and why.	

Refinement log

What was clumsy	Refinement made	Result

Safety check (tick): I used no personal data (no faces, voices or names). ☐

Exit ticket

Exit ticket - Name one improvement you made, the lever it used, and explain how it makes both audience outputs reliable and fit for purpose.

_____

_____

Challenge (stretch)

Challenge - Apply the skill to a more complex case and justify the approach: add a third audience that needs a spoken-style summary, decide where the workflow branches for it and which tool it uses, and explain why your shared stage still only checks the facts once. This stretches toward the Proficient outcome of designing and justifying multi-branch AI workflows that stay reliable across audiences.

_____

_____
