Week 3 - Lab - Worksheet | Critical Evaluation & Informed Interaction - Lab: Iterating and Evaluating a Model's Outputs Against Criteria

Name: _____ **Class:** _____ **Date:** _____

Score the whole set against fixed criteria, then let the pattern guide your next single change.

Evaluation grid

Score each output against the two agreed criteria and write the evidence you used for the score.

Output	Score vs criterion 1	Score vs criterion 2	Evidence
A			
B			
C			

Two-cycle version log

Record the single change and the result for each cycle, then write your final justification.

Cycle	Single change	Result vs criteria
1		
2		

Justify your final workflow

In full sentences, justify why your final version is the strongest, relating evidence from both cycles.

_____

_____

_____

_____

_____

Tool log - Teachable Machine retrain + packs (improve through iteration)

Record as you work. Goal: A three-iteration score record explaining the impact of each change.

Step	What I did	What I saw / result
1	Test the current model and record the score.	
2	Make one change and retrain (an iteration).	
3	Re-test and record the new score.	
4	Repeat once more, so you have three scores.	
5	Explain the impact of each change with evidence.	

Iteration scores

Iteration	Change made	Score / 10

Safety check (tick): I used no personal data (no faces, voices or names). ☐

Exit ticket

Justify why your final workflow is stronger than version one, citing evidence from both iteration cycles.

_____

_____

Challenge (stretch)

Challenge (stretch): design a third criterion that would make the evaluation fairer, explain what it would reveal, and predict how it might change your ranking - moving toward the Proficient outcome of designing and defending an evaluation, not just applying one.

_____

_____
