Week 5 - Integrated Task (Design & Build) - Worksheet | Integrated Prerequisite Mastery Task - Design, Build, Evaluate & Justify an AI Solution

Name: _____ **Class:** _____ **Date:** _____

Our workflow map

List your steps in order and the tool each one uses. Start with the enquiry and end with the checked reply.

Step (in order)	Tool for this step

Our design choice

Write the input, the order of your steps and the output, then one design choice you made and why.

_____

_____

_____

Test log

Run three enquiry cards and record the reply and whether it passed the verify check.

Enquiry card	Reply produced	Passed verify? (yes / no)

Tool log - Teachable Machine + Scratch (integrated: design, build, first measure)

Record as you work. Goal: A built solution with a first measured score and a target limitation.

Step	What I did	What I saw / result
1	In pairs, plan the small solution with the plan cards, inc	
2	Train a simple non-personal model and build the solution i	
3	Run it on a short test-set and record a first score.	
4	Note the single biggest limitation to fix in Week 6.	
5	Save your build and note what each strand contributed.	

First measure

Test case	Output	Correct?

Safety check (tick): I used no personal data (no faces, voices or names). ☐

Exit ticket

Exit ticket - Name one design choice you made (a step you added or moved, or a tool you chose) and explain how it changed one of your workflow's replies.

_____

_____

Challenge (stretch)

Challenge - Add an enquiry your workflow has never seen (for example a question the FAQ does not answer) and predict how your workflow will handle it. Explain which step should catch it and what it should do instead of guessing. This stretches toward the Proficient idea of designing workflows that handle new, unexpected inputs.
